

We provide customised solutions for a wide range of vehicles. These protection solutions are well-proven products whose effectiveness has been demonstrated in combat zones around the world. Add-on armor is a lightweight protection system that requires few technical changes to the vehicle while increasing the protection level substantially.

In addition to the ability to protect against projectiles fired from specific types of weapon, add-on armor is capable of withstanding many different kinds of impact, including vibration and shock. This armor solution is resistant to UV light, ordinary chemicals and decontaminating agents. In addition, it features a high multi-hit capability that provides crews with an outstanding degree of protection if their vehicle is hit by multiple projectiles or fragments.

Add-on armor technology is available with a wide range of options. These customized solutions make it easier to provide users with a protection system tailored to individual needs and specific types of vehicles. A wide range of technologies and materials can be applied to ensure end-users with the highest level protection against ballistic threats.
