

DELTA UNHCR Overt Bulletproof Vest:

- This bulletproof vest is designed for Humanitarian Convoy observers and participants operating in lower risk regions.
- The principal design features include maximum protection and security of the user.
- The vest sheathing is made of top quality materials.
- The vest is designed for use in any weather and climate conditions.
- The outer part of the vest's sheathing is made of high-quality materials resistant to tearing and abrasion. It does not stain clothes, nor cause any allergic reactions.
- The ergonomics of use is guaranteed, among others, via a system of elastic inner side belts and spacing mesh improving ventilation
- The vest features an internal elastic stabilizer belt ensuring that the user is able to adjust the vest size properly, so that the vest weight is distributed from the shoulders to the waist.
- The design of the vest allows the use of hard ballistic plates, increasing the scope of protection provided, and the use of additional inserts, increasing the protection area for the neck and abdomen.
- Badges and inscriptions can be attached the vest's front and back via Velcro tabs.
- The abdominal panel is an additional element that can be attached to the vest
- Ballistic resistance: the product is available with various ballistic resistance configurations - as per order. For example: K2 - O2 / K5B according to Polish Standard PN-V-87000:2011 or NIJ IIIA / NIJ IV according to NIJ Standard 0101.04, etc.
