

The Pilot Seat Overlay works by fitting the space between the backrest and the body thus improving the body position of the pilot during flight, which reduces the static and dynamic loads acting on the spine and significantly improves the comfort and welfare of the pilot.

Ergonomic Inserts are designed for use in the seats of Mi-24D and Mi-24W. Shape memory allows the body to match the pilot's seat with regard to its individual needs. The Pilot Seat Overlay is fitted directly on the seat (under parachutes S-4) in place of regular Factory Lining and are secured to the seat with fastening devices.

## The Pilot Seat Overlay consists of:

- The Pilot Seat Overlay - for the Pilot - one piece (dimensions: length 1470 mm width 510 mm).
- The Pilot Seat Overlay - for the Co-Pilot - one piece (dimensions: length 1210 mm width 580 mm).
