

AMH-2 is a multi-purpose training helmet equipped with a system of protection pads ensuring high impact protection (conforming the EN 397 standard) while providing comfort and convenience for the user. Helmet edge is additionally secured with EPDM caoutchouc rubber. Apart from its training advantages, it is fit for use in any situation where ballistic protection is not required, but there is a necessity for lightweight and multipurpose gear. The helmet is perfect for conducting marine operations. It is equipped with a night vision mount and side rails for mounting accessories such as flashlights or cameras. Additionally, the helmet is fit for quick mounting of modular components such as protective front visor or jaw guard.

#### Colors:

- Black.
- NATO green.

#### Protection class:

Impact protection (EN 397), protected against puncturing / piercing.

#### Special features:

A system of adjustable, breathable protection pads. Side rail technology that allows to mount modular protective components/accessories. Lightweight. Very good ventilation system allowing for prolonged use without the need to take off the helmet.

#### Additional options:

The helmet can be supplied with a fabric transport bag. A wide range of accessories, including polycarbonate visor, bands (velcro), elastic lines.

#### Technical parameters

Material	fiber-reinforced composite, edge secured with EPDM caoutchouc rubber
